

## Aptagenesis™

Aptagenesis™ reduces the unpredictability, cost, and time for drug discovery and development.

The unique chemistry of aptabodies™ (patent pending), unlike other forms of drugs currently used, permits the "natural" selection of drug candidates in whole animal models, taking drug development one step closer to human clinical trials, saving several years and 35% of drug discovery & preclinical R&D costs.

Aptagenesis™ can be used to increase the specificity and improve delivery of existing drug compounds resulting in the next generation of pharmaceuticals with improved pharmacodynamics and pharmacokinetics.

Contact us for more information on how we can help you solve your drug pipeline needs.
